MEANS MUCH TO ELY CONSOLIDATED

Fifteen Feet Sulphides Show That Large Acreage Is Finely Mineralized.

ORE GROWING BETTER WITH GREATER DEPTH

Salt Lakers Registering Fine Results in Large Ely Group of Claims.

General Manager Claus Jeldness, of the Ely Consolidated company, has written to the Salt Lake office of the company confirming the find of copper sulphide ores regarding which he wired the officials Monday. It was stated in Tuesday's Tribune that Mr. Jeldness had driven the Brilliant shaft into ten feet of the sulphides, but his letter states that five additional feet had been made subsequent to the message. Mr. Jeldness gives no idea of the value of this ore, and this could hardly be done in justice to the discovery, for he states that each foot as gained in depth gives a decided improvement in value and strength.

It has been the history of ore developments upon the Ely Consolidated that the sulphides gain in value as depth is secured upon them. In the Ruth shaft of the Nevada Consolidated company, directly northwest of the Ely Consolidated Brilliant shaft, it is stated the management had to penetrate the sulphides for fully forty feet before the best values were encountered. The local management of the Ely Consolidated, therefore, expect good word regarding values at any time from now on.

tered. The local management of the Ely Consolidated, therefore, expect good word regarding values at any time from now on.

The importance of this find of sulphides in the Brilliant shaft cannot be everestimated. In local circles it has been expected that the Zack shaft would find abundant sulphides, as this working is located on the neck that extends some distance into the Nevada Consolidated ground. The main portion of the Ely Con. property is located due south of the Nevada Consolidated, and the Brilliant and the American shafts both are going down upon territory that may be taken as a general average of the major portion of the group. It opens, therefore, abundant reason for concluding that an exceedingly generous acreage will be found by this company of equally magnificent proportions and promise as the Nevada Consolidated has been rewarded with.

ed with.

The Sait Lake stockholders are de ighted with the discovery, which, while not unexpected, serves to confirm so positively that their early estimation of the ground was entirely within rea-

NEW COPPER CAMP.

Echo District Can Produce Rich Copper Ores With Gold.

per Ores With Gold.

What gives many indications of being a tich copper region has been discovered a few miles northwest of the town of Schwab, near what is known as Cow Creek, and R. E. L. Coiller, who has been in that section of California and southwestern Nevada for several weeks, states that there is a good old-fashioned stampede to this new section. The find was made in the Echo district, which, up to the present time, has distinguished itself for its showing of yellow metal. Mr. Coiller states that he does not know much regarding the merits of the copper district, but from several reports it seems that the red metal values are extremely satisfactory. It is stated that the gold values in the ores lend an additional attractive feature to an interesting camp.

Mr. Coiller is greatly taken with the

sting camp.

Mr. Collier is greatly taken with the light district generally, and he is of the esting camp.

Mr. Collier is greatly taken with the Echo district generally, and he is of the opinion that this portion of Inyo county will prove of great permanency. Several Sait Lakers have gained footholds in the section, and their possessions are counted among the most attractive there. The Inyo property, in which many Sait Lakers have gained footholds in the opinion of Mr. Collier, will compare favorably with the Montgomery Shoshone, and if it has a superior anywhere it is this noted gold mine of the Builfrog district. The Inyo company owns 17 claims, and the organization has been extremely alert in developing the resources of the group.

In several different portions of the property, Mr. Collier states, the company has turned up splendid resources, and with depth there is no diminution in values or extent. With the equipment now being installed or en route the organization will be in a position to produce splendid resources. Mr. Collier has been engaged in making a survey of the group for the company, and he had every opportunity to inspect the ground and the workings in the most thorough member. The Inyo proposition is another illustration of success attending the efforts of Utah talent and money in Nevada and California mining fields.

Ore Shipments.

The Pioneer sampler released five cars of ore from Utah camps Tuesday. The Taylor and Brunton sampler re-leased ten from Nevada and seven from Utah camps.

Ore and Bullion.

The ore and bullion receipts for Tuesday, given by McCornick & Co., were as follows: Ore, \$124,000; bullion, \$20,000.

Safety and 6 %

Splendid Business Tuesday in Stocks on Local Exchange.

Tuesday was a splendid day on the local exchange, a total of 103,630 shares passing hands, representing a market value of \$73,275,255. It was for Newhouse of the unlisted stocks, to provide the feature of the day, this stock selling for from \$19,25 to \$20 per share. Standard Copper sold all the way from \$1.10 to \$1.17\$; Western Nevada Copper brought \$1.55 per share in several sales, Yerington Ironsides sold for 25 cents; Ely Witch sold for \$1.72\$; Copper Glance closed \$55\$, 36c. For Ohio Kentucky \$4.60 was bid; for Ohio Copper, \$5 was bid and \$6 asked: \$1.10 was bid for American Flag; Keystone was offered at 15 cents; Masson Valley closed \$2.25\$, 250; Thompson closed \$3\$, 255; Federal Ely closed \$8, 95c; or Honerine 15 cents was bid, and Western Pacific closed 20, 25c. The quotations on listed stocks closed as follows:

A M. P. M.

The mining district of Good Springs, Nev., while giving very little news of results to the outside world, is registering achievements of merit that tering achievements of merit that cannot but impress the average seeker after results. As usual, Salt Lake capital and talent are not behind the times at Good Springs, and one of the faithful shippers of ore from the camp to the Salt Lake market is the Shenandoah, strictly a Salt Lake proposition. Its sponsors are no less than Samuel Newhouse, W. M. O'Brien and Judge Burton, who have been parsuing a quiet but systematic campaign of development work for some time past.

The character of this exploratory work can be appreciated best by the

AT GOOD SPRINGS

ment work for some time past.

The character of this exploratory work can be appreciated best by the fact that the property has been contributing on an average of one car a week to the local smelters, the ores being the product of development work pure and simple. The property sont another car several days ago, and it arrived Tuesday at the sampler. As usual, the shipments consist of high-grade lead-silver ores, containing a percentage of zinc. No shipment ever sent to this market has run less than 44 per cent lead, while the silver contents are very little less in value.

Up to the present time the owners have done nothing but work directed to a better understanding of the vein system that exists upon the group. Development work soon will be on in dead carnest, for they are contemplating the installation of powerful machinery that will admit of sounding depths. With adequate equipment, and with energy bent on the realization upon resources, the Sheandeah should become one of the most liberal producers of that section of the Sagebrush State.

CONDITIONS AT ELY.

Several Reasons Given Why Stocks Are Not Moving Fast.

Not Meving Fast.

Local circles have been asking for a menth or more why Ely stocks do not become more active in the face of the splendid developments that are being registered on all sides of that district. Salt Lake is the owner of a tremendous amount of Ely copper stocks, the present duliness of the markets being of special interest, therefore, in this city. A prominent Ely operator, who does not desire that his name be used in such connection, stated to The Tribune Tuesday that there were many reasons why Ely stocks are not fully appreciated on the outside, by outside meaning the East.

Ely stocks are not fully appreciated on the outside. By outside meaning the East.

He states that it should not be forgotten that the district has been suffering from all the ills of a new mining camp, and on top of this has come one of the most severe winters ever experienced in that section of the State. The coming of the railroad was expected to be the prejude to the shipments of vast amounts of resources, the general public falling to take into consideration that the main virtue of Ely is its milling orea, which require time and machinery to reduce to a commercial basis.

There are a great many proporties now producing shipping ores of lead and sliver, but hardly sufficient time has been allowed the owners for extracting these ores. But it should not be forgotten that the red metal is the thing at Ely. Slowness in development work throughout the copper producers has been the programme through necessity during the past few months. Those companies which needed machinery for shicing into the ground had first to fight against a similar demand from all over the Western country, the demand creating a shortage of mining machinery. When equipment was secured, it then became a question of getting it to the camp of Ely, and then came the difficulties incident to labor scarcity when the owners wanted this machinery installed.

This gentleman states that good labor is scarce in the district, and well paid at that. Peading the arrival of hoisting machinery, development work had to stop in some instances just at the interesting stage of the game because the miners

in some instances just at the interesting stage of the game because the miners refused to go deeper with the windlass. Lumber costs anywhere from \$50 to \$75 a thousand delivered at the mines, and in many instances it could not be purchased even at that. The camp for a time was suffering from a gasoline shortage also. So everything considered, Ely has been paying the penaity of being a new camp, and those who purchased stock expecting to make a few hundred stock expecting to make a few hundred new camp, and those who purchased stock especting to make a few hundred per cent within the first few days have been disappointed, and unwisely sold out for little or no profit, not desiring to re-main in and wait for returns so sure to come.

Neven Troughs, 200 at \$1c; 100 at 77c. "Within two years Ely will be producing more tonnage than Butte," is this gentleman's conclusion. "A single claim in the heart of Butte today will brim in the heart of Butte today will bring anywhere from a quarter to a million dollars just on account of its location, and upon which there may not be a single speek of visible topper. What will Ely be in two years or less? When the great reduction plant has been finished, when all the prominent and carneatly-conducted properties have been properly equipped and developed the East will begin to realize what Ely is worth. The boom that occurred during the latter part of last year will be forgotten in its insignificance, and the real era of prosperity will then be on."

AMERICAN FLAG MEETING.

Successor to Capt. Singiser Is Selected Tuesday by Directors.

Tuesday by Directors.

At a mesting of the board of directors of the American Fing Mining company, held yesterday. George H. Rathman of Sloux City, Iowa, was slected president and treasurer of the corporation to fill the vacancy caused by the recent death of Capt. T. F. Singiser. J. H. Keene, a Chicago capitalist, was elected to fill the vacancy on the board of directors caused by Capitalist, Singiser's death. Mr. Rathman has assumed active management of the company. He has resigned as president of the Livestock National Fank of Sloux City in order to devote his personal attention to the mining company and will spend much of his time in Salt Lake City. The control of the American Flag is owned almost entirely by wealthy Eastern men, and the polley of the company will remain unchanged. Wen, M. Curries, under whose direction the development of the company's Park City property has been in progress for some time, will remain as superintendent. The directors took suitable action on the death of President Singiser, and ordered a memorial prepared to be sent to the stockholders. The directors present were George H. Rathman, George P. Holman and E. B. Palmer. San Francisco Mining Stocks.

ZENOLI SHIPMENTS.

Company Will Maintain One Car of Ore Word from the East is that the Montgomery Shoshone property will be fully equipped with the mill by May first, and the plant in running order by that date. Then will begin the era of dividends so soothing to the investor's conscience, and that the Shoshone will be a liberal sharer of profits none doubt who are in any degree familiar with the wonderful resources of this Builfrog mine. It is learned that the developments upon the 200-foot level of the Polaris ground have been eminently satisfactory, the management adding greatly up to the present time to the possibilities of this splendid property. Per Day This Season. Per Day This Season.

Two cars of high grade ore are being loaded by the Zenoli Mining company near Pallsade, and the management expects to maintain a record of one car per day during the season. The latest strike of resources was made in back of what is known as the South voir, and assays show that 2 feet 4 inches of ore will average 259.8 ounces sliver. 26 her cent lead and 1.9 per cent copper. This disclosure will serve to add materially to the earning capacity of the organization, in which many Salt Lakers are interested.

NELSON QUEEN TO BE COPPER MINE

Mining Engineer Makes Report Upon Park City Property for Company.

COPPER TO PREDOMINATE AT LIBERAL DEPTHS

Interesting Geology of Mine in Which Utahns Are Heavily Interested.

The report just filed with the offi-cials of the Nelson Queen Consolidated company by O. A. Palmer, the mining company by O. A. Palmer, the mining engineer, regarding the present condition and geology of the Park City mine of that organization will be of interest to numerous Salt Lake stockholders. There are few engineers more capable of giving an idea of a Park City property than Mr. Palmer, for his years of offort and study in that splendid camp have added experience and its lessons to the sum total of things learned during this long service. In giving the assays upon samples taken from the mine, Mr. Palmer states that the amounts underestimate the real values mine, Mr. Palmer states that the amounts underestimate the real values more than overestimate the same, and that were this property in Nevada, owing to the peculiar conditions there existing, there would be more than a threefold valuation to the mine over what it is now held in this State.

In giving in this report the geology of this property, located as it is in the Elkhorn mining district four miles east of the Ontario, those learned in Park

of the Ontario, those learned in Park Lity landmarks cannot but recognize by t the similarity of conditions at the the similarity of conditions at the Nelson Queen and other mines that have made history for that camp. The geology states the report, is very simple, consisting of trachyte. This same formation covers an area of about ten miles north and south and by about six miles east and west. Near the head of the Provo canyon it forms the highest peaks between the head waters. highest peaks between the head waters of the Frovo and Untah, and upon the west side of Provo valley it is found extending up the flank of the Wasatch range into Bonanza flat near the On-tario and Daly West mines, while at its northern extremity it forms the low hills between the Weber river and the

hills between the Weber river and the Kamas prairie.

"This is its present outline after enormous crossion has taken place," continues the report. "This trachyte flow evidently has come up through many vents in the forms of dykes, and covered the surrounding surface, as well as occurring in some justances in the form of daccolites, judging from the sedimentary beds dipping under it, as well as those fragments still found overlying it. These sedimentary beds consist of carboniferous quartizites and limestones. The trachyte has been subjected to considerable disturbance as evidenced by extensive fissuring. This evidenced by extensive fissuring. This eruptive presents some considerable variation in texture, being mostly highly crystalline, sometimes very uniform It is to the fissuring of this cruptive that we must look for what ore we ob-tain, as that is the only form of lode occurrence recognized here at pres-

Upon the Nelson Queen Consolidated ground there are two of these fissures so far observed. These have a course nearly northeast, which outcrop boldly. The outcrop of one can be identified for fully 8000 feet, and the report states that undoubtedly there are other fissures which will be found by further crosscutting. The double compartment shaft has been sunk to the 200-foot level, and a drift run from it about ninety feet to what is believed to be the lode. The report recommends that this drift be sent forward as acrosscut to tap other fissures that may exist there. The shaft is well equipped to handle all the water that is developed along this level. The equipment of this working in every way will permit the management to drive to the

700-foot level.

Between the shaft and the camp is a tunnel run upon the same lode for a distance of 400 feet, a raise extends from this tunnel to the surface, and is wholly an ore chute. Other ore chutes

owing to the fact that the pitch of the chutes follows the direction of the walls of the fissures, its economical working becomes a simple matter. The metals so far developed are gold, lead, copper, silver and iron, and judging from appearances the report states that the mine at depth will be a copper pro-ducer. The sedimentary beds underlie ducer. The sedimentary beds underlie the trachyte at some unknown depth and the strength of the fissure at the surface leads to the belief that it will be found extending down into these underlying beds. This being the case it is only fair to presume, as in harmony with experience, that at its intersection with the lime beds there may be expected large ore bodies. pected large ore bodies.

pected large ore bodies.

That such conditions do exist in such mines as the Daly West, Daly Judge and the Silver King properties is a matter of general knowledge. Several assays taken show the following results: General sample from drift above tunnel, 8.60 ounces silver, \$4 gold. 24 per cent lead and 2 per cent copper. From tunnel level where first chute was found, 3.4 onnees silver, \$1.60 gold. trace of lead and 4 per cent copper. From ore dump at mouth of tunnel, 5.20 ounces silver, \$1.60 gold and 7 per cent

copper,
These conditions seem to me to contain all that is essential in connection with intelligent mining to produce a paying property," concludes the re-

DASIS OF EXCHANGE.

How Greene Copper and Cananca Stocks Go Into Merger.

Go Into Merger.

James A. Pollock & Company, bankers and brokers, 8 West Second South street, furnish the following, received over their private wire yesterday afternoon:
Boston wires: Understand exchange of Greene Copper and Cananea Central stock for the new Greene-Cananea will be made on the 14th inst. The Greene-Cananea will be made on the 14th inst. The Greene-Cananea will be made on the 14th inst. The Greene-Cananea will be made on the 14th inst. The Greene-Cananea will have a capital of \$80,000,-900; \$50,000,800 issued \$10,000,000 in the treasury. Greene stockholders will get one and one-half shares of the new stock for one of the old and Cananea Central stockholders will get one and two-thirds shares for one of the old. There will be 2500 shares of the new stock exchanged for the Greene Copper and Cananea Central stock at a par value of \$20 per share. Understand the Greene-Cananea company will have over \$5,000,-900 cash in the treasury."

HIGH COPPER VALUE OF YERINGTON ORES

Yerington Copper Company Is Driving Tunnel With Face All Ore.

Salt Lakers again are registering another victory at the copper camp of Yerington, and upon the property of the Yerington Copper company, although in the light of the past splendid performances of this property the present developments can best be stated as accumulative achievements. Word has reached the Salt Lake offices of the Yerington Copper company that the main tunnel has opened up the banner copper resource so far encountered on this group. For over fifty feet in this tunnel the formation has been of fine import, containing ore all the way, but this ore has now extended so liberally that the full face of the tunnel is in ore that will average 12 per cent copper.

per.
The Yerington Copper company strictly is a Salt Lake organization, and one of the first to be formed last year when the Yerington excitement was at its height. The property has been the scene of some characteristic Yerington disclosures during the past few months, but the present showings at good depth are doing more to convince the local stockholders of their proposition than any heretofore registered. The management is driving a new working shaft upon the intersection of two years, one of which has produced the foregoing results in the tunnel, and with the progress of this shaft some exceptionally fine red metal developments can be expected by the company. ompany.

SOUTHERN PACIFIC ORES. Handsome Line of Samples Displayed

in Salt Lake Window.

In showing just what Utah's possibili-ies are in the way of high-grade cop-er ores, the exhibit placed in the Salt ties are in the way of high-grade copper ores, the exhibit placed in the Salt Lake Hardware company's window Tuesday by General Manager J. W. Burnham, of the Southern Pacific property near Ogden, comes mighty near placing the cream of Yerinston's ores in the same window, far back in the shade. This ore comes from the Southern Pacific mine in the Sierra Madre district, and for beauty and richness there are few lines that can equal this arry of resources. In all there are about 150 pounds of samples, and they should do a great deal towards securing more recognition for

In all there are about 150 pounds of samples, and they should do a great deal towards securing more recognition for this red metal district of Utah.

Mr. Burnham stated to The Tribune that these samples would average anywhere in valuation from 11.4 per cent copper and \$2.40 gold to 69.5 per cent copper and \$35 gold, containing free gold in several places, also running high in molybdenum. While these samples do not iffustrate the average quality of Southern Pacific cres, they emphasize to what a generous extent this mine can be a shipper of crude as well as a concentrator of milling ores. In driving the long crosscut tunnel through the mountain covered by the lines of the Southern Pacific, the average of a crosscut now 50 feet in ore without an end yet to resources, is 6.4 per cent copper, 4 once silver and \$1.50 gold.

The samples exhibited are sulphides, carrying in addition some native copper, and they attracted considerable attention after being displayed.

EMMA COPPER ORES.

Drift Goes Into Body Forty Feet and Still in Chute.

Still in Chute.

Supt. James E. Beveridge, of he Emma Copper company, has notified the local offices of the company that the drift has gone into the recently encountered ore body for a total distance of forty feet, and the ore is growing richer with each shot. At first the contents of this ore chute ran mostly to concentrating values, but these are giving way to theter contents, and the management is delighted with the way in which this resource is tooking. It seems certain that the Emma Copper company has a winner upon its staff in this Alta property. Theseday night the management went to work sinking upon this resource, and the develonments with depth will be watched closely in local circles, where most of the stock is held.

UTAH MINES IN THE EAST.

Utahns Find This State Far in Lead in General Estimation.

General Estimation.

Messirs Rowe and Kelly, the wellknown furnishers of this city, who have
spent the past two weeks in securing the
latest lines of spring clothes for men in
Lastern cities, arrived from New York
Tuesday, Aside from adding to their
stock to a generous extent, they lost no
opportunity to impress upon the Eastern
mind that Utah is one of the greatest
mining States of the Union, and they
found very sympathetic ears, for no State
is better regarded by capitalists for
legitimate mining investments than Utah,
Mr. Kelly stated yesterday afternoon that
Utah everywhere is highly regarded for
its mineral wealth, and for the manner
in which its mines are exploited and
managed.

The Metal Quotations.

The metal quotations for Tuesday, post-ed by McCornick & Co., were as follows: Lead, \$6: copper, 24c; no quotation on silver owing to holiday in the East.

Mining Notes.

Will C. Baird, bookkeeper for the Co-lumbus Consolidated company, is in the city from Alta. Gold Bar company of Bullfrog will the local market the end of this with a car of high-grade.

Alfred Frank, of the Heinze staff, is in the city from Butte. Mr. Heinze is ex-pected the last of the week. President Tony Jacobson and Assistant secretary Val S. Snow of the Columbus consolidated spent Tuesday at the mine. Captain A. O. Tibblits, the mining en-fineer, is in the city from a visit to his ome at Portland.

Samuel Newhouse, president of the Nipissing, states that reports from the mine are of the most satisfactory import

Stolen Stock.

EVERYTHING CHOICE IN ZION MARKET

Farmers Holding Back Fresh Eggs in Order to Stiffen Present Prices.

INCREASING DEMAND FOR SPRING VEGETABLES

Varied Assortment of Fruit and Nice Fresh Poultry in Abundance.

When eggs take a drop according to market authority, there will be a smash and it wont be the eggs that will suffer, but the wily hen-fruit farmers, who are holding back their plentiful supply so as to reap the golden harvest that is just now being garnered.

Despite the beautiful weather, ideal "laying time," the local egg market is a tight one. The average price given yesterday was \$10 a case and few cases to be had at that. The prices are running from \$0 to \$12 a case, and this is not due to a corner, but to the fact that the market is a little demoralized. Dealers are fearful of running out of a supply, and when a consignment can be had offer almost anything for them. But while the shrewd farmer may be making money these days, it will be but a short time before the supply will be so large that eggs will drop with a thump, However, the housewives are paying 35 and 40 cents a dozen for them and the retail dealers are glad to buy them at 35 cents a dozen themselves.

The housewives have gone mad on the subject of green and fresh spring vegetables and the present supply is dwindling fast. Moapa lettuce, radishes, a little celery, cauliflower and green onions are evidently relished by Zionitzs. Cranberries are still a drug on the market at six quarts for a quarter.

The wholesale prices of the spring vegetables show that the market is fairly well supplied. Lettuce is selling for 50 to 60 cents a dozen heads, green onions. 25 cents a dozen heads, green onions, 25 cents a dozen heads, green onions, 25 cents a dozen sens all pound, while potatoes are selling at \$1.10 per hundred pounds; good onions for \$1.00; cabbages for \$1.10; cleivy is very scarce at 50 to 60 cents a dozen cauliflower. It cents a pound, and radishes 45 cents a bundred pounds, parentps at \$1.10 per hundred pounds. The seas

Wholesale Prices.

The latest grain and feed quotations in the Zion market are: Timothy, \$18 a ton; alfalfa, \$15 a ton; oats, \$1.60 per 100 pounds; rolled barley, \$1.45 per 100 pounds; rolled oats, \$1.70 per 100 pounds; milling wheat, \$1.40 per 100 pounds, and whole corn, \$1.35 per 100 pounds, and whole corn, \$1.30 per 100 pounds.

Boston Wool.

Boston Wool.

BOSTON, Feb. 12.—There is little interest in the wool market, but prices rest in the wool market, but prices remained steady. The situation has been described as firm without being bullish. Territorles are firm and inactive.

There is a steady demand for pulled wools running to staple and supplies of such are kept closely solds up. Foreign wools are firm. Quotations.
